

PLACEMENT: Place GYRO in helmet with round tab at front, black comfort side against head.

MAKE SURE YOUR HELMET FITS CORRECTLY

- Helmet is to rest firmly against your head on all sides and the top.
- Ear holes should align with the opening of your ears.
- The front of your helmet should rest 1" or less above your brow.
- The helmet should not shift on your head. Refer to your helmet fit guidelines or your team training coaching staff if you have any questions.

NOTE: If after you've made all possible adjustments using customization tools of your helmet you find the helmet to be too tight, consider going to the next larger size. Likewise after all possible adjustments if your helmet is too loose and you experience GYRO slippage, consider going to the next size smaller.

CARE: Hand wash only.
