

UNEQUAL GYRO™

Reduces Acceleration, Absorbs & Disperses Impact Force

SUPPLEMENTAL PROTECTIVE HELMET LINER
MADE WITH UNEQUAL'S NURO TECHNOLOGY

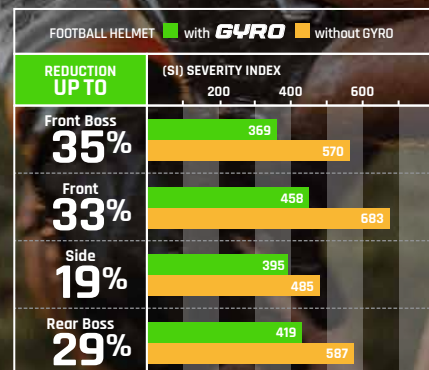

Permitted for practices & games by the NFHS®

FEATURES

- Utilizes Unequal's NURO technology, a military grade, patented composite made with a coated aramid fabric which can help reduce risk of head injury by reducing acceleration, absorbing and dispersing impact force*
- Backed by independent testing from accredited lab, test results show a reduction in severity index up to 35%
- Simply place with no adhesive necessary, fits most helmets, but can be trimmed with sharp scissors. Best practice is to have the Gyro on-hand at time of helmet fitting

BENEFITS

- Being concealed inside the helmet instead of on-top like others, allows use not only at practice... but can be worn during the team's more aggressive gameplay too!
- Players & parents feel more secure with the added protection... players report hits feel "better" - not as jarring. Added protection can lead to greater confidence and a competitive edge
- Can improve overall fit of youth players helmets when issued one that is slightly too large

GYRO 2 tested under NIOSH standards at an independent accredited lab-06/16/16. Testing Measure: SEVERITY INDEX (SI). Results may vary.

*DISCLAIMER: Unequal reduces risk of head injury as compared to a helmet alone. Leading medical doctors, PhD's and scientists have concluded that a reduction in acceleration correlates with a reduction in concussion risk. Any player in any activity, game, or sport, can sustain a head injury even with head protection, and that no helmet, pad or Unequal product can prevent concussions or eliminate the risk of these injuries.
